

infosecurity ireland

ISI Objectives

- To be the Irish voice of information security
- To promote Ireland, its technologies, firms and graduates as an information security centre of excellence
- To offer assistance to the Irish government on matters relating to information security
- To be seen as an information security thought leader

ISI – InfoSecurity Ireland

InfoSecurity Ireland promotes Ireland as a natural centre-of-excellence for information security and data governance.

Information Security Ireland (ISI) was founded with the support of Enterprise Ireland in 2009. As Ireland's Information Security network it provides a platform for collaboration and co-operation between information security companies, research institutions, third level colleges and government agencies. These organisations work together to promote Ireland, its technologies, firms, and graduates as an information security centre of excellence.
